COMPANY HISTORY & INFO

GN Good Nutrition has been manufacturing customised bypass fats according to needs of dairy cows and innovative feed additive blends with technologies that provide improvements to gut health, enhanced immunity, effective energy utilization, and increases in reproductive performance for 10 years.

Our bypass fats provide energy according to regional needs and dairy farm requirements. Our additives improve digestion of fats and oils and others complement vaccination programs and aid in combatting various bacterial, protozoan and viral challenges. GN Good Nutrition's feed additives are developed for application to poultry, swine, dairy, and aqua feeding programs.

We believe in protection of the environment and sustainable feed additive solutions using the power of digestive enhancers, monoglycerides, activated lipids (BioX technology) to assist in reduction of antibiotics and promote animal performance.

COLLABORATION

Join us in revolutionizing animal nutrition and sustainable farming. We're actively seeking passionate partners to grow our impact in three key areas:

DISTRIBUTOR/AGENCY

First, we invite distributors and agencies to help us expand our market reach, bringing our innovative feed additives to more farmers worldwide.

COLLABORATIVE RESEARCH

Second, we're eager to engage in collaborative research with academic institutions and industry experts to drive further innovation in organic animal nutrition.

INVESTORSHIP

Lastly, we welcome forward-thinking investors who share our vision of a healthier, more sustainable future for agriculture. Whether you're interested in distribution, research, or investment, your involvement can play a crucial role in shaping the future of animal health and food production. Connect with us today to explore how we can work together towards a healthier planet.
